配置

kibana.yml

```
1  [root@106.52.90.51 config]# ls
2  kibana.yml   node.options
3  [root@106.52.90.51 config]# pwd
4  /usr/local/kibana/config
5  [root@106.52.90.51 config]#
```

```
1  i18n.locale: "zh-CN"
2  server.port: 8309
3  server.host: "0.0.0.0"
4  server.name: "SGQY"
5  elasticsearch.hosts: ["http://10.10.6.140:8308"]
6  elasticsearch.username: "sgqy"
```

```
7 elasticsearch.password: "sgqypass"
```

设置自启

```
1 [root@106.52.90.51 metricbeat]# cat /etc/init.d/kibana
2 #!/bin/bash
3 # chkconfig:   2345 98  02
4 # description:   kibana
5 case $1 in
6         start) su - elasticsearch -c "/usr/local/kibana/bin/kibana &";;
7         *) echo "require start";;
8 esac
```
